Manage Every Operation—from Planning to Proof

Field & Boundary Management

Keep every field organized in one place. Create and store boundaries and key points, then reuse the same data across guidance, planning, tasks, and reports.

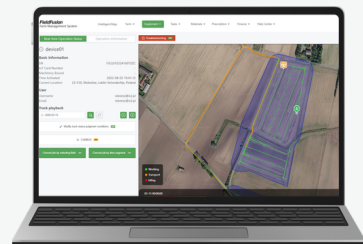

Guidance Lines & Smart Path Planning

Plan efficient routes before work begins. Reduce overlaps, missed areas, and unnecessary turns with paths tailored to each field and operation.

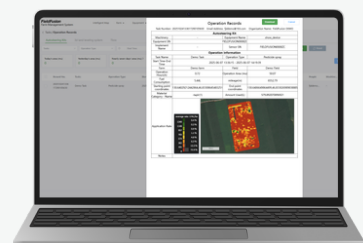

Real-time Monitoring

Know what's happening in the field without being there. Track machine location, speed, RTK status, routes, and job progress from your phone or computer.

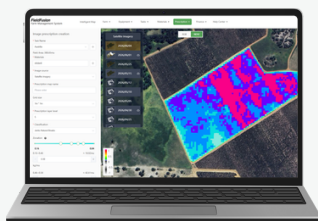

Operation Reports

Turn every job into a complete, traceable record. Generate reports on area, routes, speed, coverage, and application data for review, settlement, compliance, or proof of work.

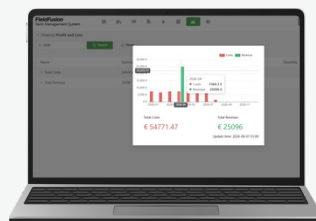

Turn Field Data into Smarter Decisions

Prescription Maps

Apply the right rate in every zone. Build prescription maps from imagery, soil, yield, or third-party data for variable-rate seeding, fertilizing, and spraying.

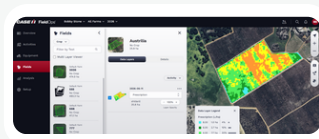

Inventory Management

Know what was used, where it was applied, and what remains. Link seed, fertilizer, and chemicals to each job for clearer cost tracking and tighter inventory control.

CNH FieldOps Connection

Connect FieldFusion with CNH FieldOps. Import field data and send prescription maps back—reducing duplicate entry and manual file transfers.

AI Assistant

Get answers without searching through manuals. Ask about workflows, features, or account data and get quick guidance to reduce training time.

Connect Hardware. Complete the Operation Workflow

FieldFusion connects mapping, guidance, land leveling, machine monitoring, and yield data in one platform, creating a complete loop from field data collection and planning to equipment execution and results review.

Auto Steer + FieldFusion

Plan fields, boundaries, guidance lines, tasks, and routes in FieldFusion, then send them directly to the in-cab terminal. After each job, automatically sync tracks, area, speed, coverage maps, and reports back to the platform.

Precision Spraying + FieldFusion

Create prescription maps from imagery, soil, yield, or third-party data, then send them to the sprayer for variable-rate application. After the job, review coverage maps, application rates, and reports to verify exactly what was applied.

Land Leveler + FieldFusion

Create leveling tasks from design files or historical elevation data, then send them to the land-leveling system. Compare original, target, and post-operation terrain to clearly verify the results.

AYM Yield Monitoring + FieldFusion

Sync yield and moisture data to FieldFusion after harvest. Identify high- and low-performing zones, then use these insights to improve next season's seeding, fertilizing, and prescription strategies.

Extend FieldFusion Across Your Operation

FFLink + FieldFusion

- Sync machine status and terminal data
- Review equipment performance and job history
- Access operation reports in one place

Weather Station + FieldFusion

- Monitor temperature, humidity, rainfall, and wind
- Sync local weather data to FieldFusion
- Choose better timing for field operations

Smart Water Valve + FieldFusion

- Plan irrigation by field, crop stage, and weather
- Run irrigation remotely and on schedule
- Track flow, water use, status, and alerts

V4e PRO + FieldFusion

- Map fields on foot—no tractor required
- Capture boundaries, AB lines, obstacles, and key points
- Reuse data for guidance, routes, prescriptions, and alerts

More Accurate Operations

Reduce missed areas, overlaps, and avoidable errors with shared field data.

More Transparent Management

View machine locations, progress, tracks, and status in one platform.

Easier Collaboration

Keep teams, machines, and devices aligned with the same field and task data.

Data That Grows Over Time

Preserve field, machine, and operational data for better planning over time.

STANDARD

- ✓ 1 Auto Steer Binding
- ✓ Weather Data
- ✓ Materials Management
- ✓ Basic Terminal Interaction
- ✓ Farm & Field Management
- ✓ Guidance Line Creation
- ✓ Finance Management

ADV

- ✓ Everything in Standard
- ✓ Up to 3 Auto Steer Bindings
- ✓ Real-time Monitoring
- ✓ Track Playback
- ✓ Operation Records Export
- ✓ Multispectral Imagery
- ✓ Troubleshooting and Analysis
- ✓ Connect to CNH FieldOps

PRO

- ✓ Everything in ADV
- ✓ Up to 30 Auto Steer Bindings
- ✓ CANBUS
- ✓ Basic Terminal Interaction
- ✓ OBD Data
- ✓ Path Planning
- ✓ Image Prescription
- ✓ Soil Prescription
- ✓ Third-Party Prescription
- ✓ Yield Prescription
- ✓ Sampling Point Management
- ✓ Yield Maps
- ✓ NDVI Imagery
- ✓ Field Art
- ✓ Multi-Machine Collaboration
